Data analyst with experience in insurance and financial services, delivering advanced analytics, MI reporting, and data-driven insight across complex, multi-source datasets. Proficient in SQL, Python, and Excel, with a strong track record of building dashboards and reporting frameworks, translating business requirements into technical solutions, and communicating findings clearly to stakeholders at all levels. Experienced in working in agile, cross-functional environments with a strong focus on data quality, governance, and continuous improvement.

PROFESSIONAL EXPERIENCE

Claims Insights Analyst

Marsh - London & Norwich | October 2022 - Present

- Delivered 400+ bespoke analytical reports and dashboards for senior underwriting, executive, and client stakeholders, supporting data-driven decision-making across the business.
- Conducted loss ratio analysis, exposure benchmarking, and claims financial analysis, including AD/TP cost breakdowns, amounts paid, and outstanding reserves for external insurance clients.
- Led the onboarding of 100+ clients and 150+ users onto the online claims platform, providing training and support to ensure smooth adoption and high client satisfaction.
- Cleaned, validated, and analysed large datasets using SQL, Python, and Excel across multiple data sources, maintaining accuracy and consistency for reliable reporting.
- Mentored junior analysts and produced technical documentation and knowledge-sharing resources to strengthen team capability.

System Analyst

Netcracker - Remote | September 2021 - April 2022

- Translated complex business requirements into functional and non-functional system specifications, writing user stories and documentation for development teams.
- Developed mock applications in Java and SQL to demonstrate client-specified functionality.
- Collaborated with engineering and business teams to ensure alignment across project workstreams.
- Contributed to client-facing presentations supporting the sale of enterprise IT solutions globally.

Requirements & Specifications Engineer Intern

Sony Electronics Europe - Basingstoke | July 2019 - August 2020

- Developed a Python automation tool to parse and report on XML data structures, unlocking previously inaccessible data and reducing manual processing time.
- Built and maintained internal applications (PHP, JavaScript) to support requirements validation.
- Verified software requirements against compliance standards and state institution requirements.
- Produced onboarding documentation adopted as standard training material for new team members.

EDUCATION

Recent Courses: CII Data Science and AI in Insurance; Data analysis in Tableau
