

Dier Abdullakhanov

London, United Kingdom | Dier.abdullakhanov@gmail.com | www.linkedin.com/in/Dier-abdullakhanov/

Technical Business Analyst with 4+ years of experience bridging business requirements and technical delivery in financial services and technology environments. Skilled in systems integration, SQL, Python, data analysis, and solution documentation, with a proven ability to define requirements, map data flows, and support delivery of reliable, scalable solutions. Experienced in collaborating with multidisciplinary teams to align technical design with business needs.

PROFESSIONAL EXPERIENCE

Claims Data Strategy Analyst

Marsh, London and Norwich, United Kingdom | October 2022 - Now

- Analysed large claims datasets using SQL, Python and Excel to identify trends and support decision-making.
- Implement data validation checks and document data flows, system processes, and reporting pipelines to ensure outputs are accurate, reliable, and auditable.
- Collaborate with developers, architects, and analysts to improve system reliability and support integration with upstream and downstream systems.
- Led client demos and training sessions to communicate insights to non-technical audiences.

System Analyst

Netcracker, Remote | September 2021 - April 2022

- Worked in a project-based environment supporting solution delivery and presales activities.
- Translated business requirements into functional and technical specifications.
- Designed CRM, billing and product management systems for prospective clients.
- Supported presales by contributing to client presentations and solution narratives.

Requirements & Specifications Engineer Intern

Sony Electronics Europe, Basingstoke, United Kingdom | July 2019 - August 2020

- Developed a Python-based automation tool to analyse and report XML data structures.
- Built and maintained an internal web application supporting requirements validation.
- Worked with QA and R&D teams to test and validate software requirements and data outputs.
- Produced technical documentation supporting best practices and system transparency.
